Conor Brown

Software Engineer · C#/.NET · Architecture & Modernization

Tulsa, Oklahoma, USA · conorbrown.dev@gmail.com

PROFESSIONAL SUMMARY

Software engineer with 12+ years of professional .NET experience and ownership of architecture, design, and delivery across operational applications, payment services, and distributed infrastructure. Leads legacy modernization, domain-driven design adoption, and cloud migration planning, and maintains the engineering standards the team builds against. Uses C#/ASP.NET Core, SQL Server, and Azure to deliver reliable operational software and improve delivery performance. Supports a team of 10 developers through architecture reviews, design workshops, mentoring, and clear standards for validating AI-assisted code.

SELECTED IMPACT

- Led the migration from on-premises hosting to Azure, modernizing a legacy .NET Framework MVC application to .NET 10 and merging the legacy codebase into the modern application. The work covered Azure App Service, runtime configuration, Entra integration, Key Vault identity, parallel pipelines, staging validation, and rollback planning.
- Replaced Elasticsearch with SQL and in-memory caching, removing a dependency that caused deployment and local development issues and could not be reached from Azure without a paid cloud instance.
- Reduced deployment time from 45 minutes to 10 minutes as a result of the Azure migration.
- Introduced domain-driven design practices: led event-storming and DDD sessions to make business rules and ownership explicit, then implemented the resulting DDD/CQRS workflow and rule-builder capabilities across aggregates, APIs, persistence, UI, and end-to-end tests.
- Established in-repository end-to-end testing in place of a separate test suite, reducing maintenance overhead and keeping tests aligned with application changes.
- Authored CLAUDE.md conventions covering DDD, dependency boundaries, modern C#, and a reference vertical slice; reinforced standards through code reviews and workshops.
- Reduced core test execution from 8–9 minutes to approximately 21 seconds through coverage-tooling changes.
- Built an Azure Service Bus usage-logging platform designed around a 99.9% delivery SLA for company-wide billing data, and remote management infrastructure serving 2,000+ servers.

PROFESSIONAL EXPERIENCE

MIRATECH

April 2025–Present

Software Developer III · Architecture and platform leadership responsibilities

- Led the migration from on-premises hosting to Azure App Service, merging the legacy codebase into the modern application; covered runtime configuration, Entra integration, Key Vault identity, parallel pipelines, staging validation, and rollback planning.
- Replaced Elasticsearch with SQL queries and in-memory caching, removing a dependency that caused deployment and local development issues.
- Reduced deployment time from 45 minutes to 10 minutes as a result of the Azure migration.
- Modernized a legacy .NET Framework MVC application to .NET 10; builds C#/ASP.NET Core Web APIs and React/TypeScript interfaces with SQL Server persistence.
- Guides a team of 10 developers through design decisions, architecture reviews, and code reviews; led event-storming and DDD implementation sessions to make business rules and ownership explicit.
- Implemented DDD/CQRS workflow and rule-builder capabilities across aggregates, APIs, persistence, UI, and end-to-end testing.

– Moved end-to-end testing into the application repository with Playwright-based regression coverage; modernized CI/CD workflows and codified engineering standards in a CLAUDE.md reference guide.
– Supported a product-line transition involving catalog identity, component modeling, pricing, drawings, indexing, and administrative tooling.
– Uses Claude Code in implementation, refactoring, testing, and legacy-code workflows; checks proposed changes against domain rules, architecture boundaries, tests, and review before delivery. Built Mega Desk, an internal agent harness integrating Claude Agent SDK and Codex CLI with Azure DevOps workflows.

IXOPAY June 2021–April 2025
Senior Software Engineer

– Built payment-related microservices including a containerized Card Account Updater to address subscription churn caused by expiring payment credentials.
– Engineered asynchronous API usage telemetry with Azure Service Bus and a 99.9% delivery SLA for billing data used across the company and by enterprise customers.
– Introduced integration-test infrastructure and secure runtime configuration patterns across cloud services.

MissGroup / Hostek January 2014–June 2021
Software Engineer

– Rebuilt web-hosting management workflows with .NET Web APIs, React, and an orchestration/gateway layer.
– Designed remote infrastructure and deployment tooling operating across 2,000+ Windows servers, including IIS, firewall, certificate, and service management.
– Built secure credential management and remote access functionality supporting controlled sharing.

TECHNICAL BREADTH

– Backend and architecture: C#, .NET Framework and .NET 10, ASP.NET Core / Web API, MVC, Entity Framework Core, DDD, CQRS, Clean Architecture, event-driven design, event storming, microservices and modular monoliths, legacy modernization.
– Cloud and platform: Azure App Service, Azure Service Bus, Key Vault, App Configuration, Docker, Azure DevOps, GitHub Actions, observability.
– Product and data: Blazor WASM, React, TypeScript, React Native/Expo, SQL Server, PostgreSQL, MySQL, MongoDB, Cosmos DB, query/index tuning.
– Testing: Playwright, xUnit, NUnit, integration testing.
– AI development: Claude Code, Claude Agent SDK, Codex CLI, custom agent tooling, CLAUDE.md context conventions, agent workflows, prompt context, code review and validation.

INDEPENDENT PRODUCTS AND CERTIFICATION

– Pathway — software engineering education platform
– Theoria — interactive music education platform
– Certified Scrum Developer — Scrum Alliance
